

Bullet Network Camera

Quick Start Guide

Foreword

General

This manual introduces the functions, installation, and operations of the camera.

Safety Instructions

The following categorized signal words with defined meaning might appear in the manual.

Signal Words	Meaning
 WARNING	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
 CAUTION	Indicates a potential risk which, if not avoided, may result in property damage, data loss, lower performance, or unpredictable result.
 NOTE	Provides additional information as a supplement to the text.

Revision History

Version	Revision Content	Release Time
V1.0.2	Updated the description of alarm output.	November 2021
V1.0.1	Updated "Important Safeguards and Warnings."	April 2021
V1.0.0	First release.	October 2019

Privacy Protection Notice

As the device user or data controller, you might collect the personal data of others such as their face, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating of the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions. For detailed information, see the paper User Manual, use our CD-ROM, scan the QR code or visit

our official website. The manual is for reference only. Slight differences might be found between the electronic version and the paper version.

- All the designs and software are subject to change without prior written notice. Product updates might result in some differences appearing between the actual product and the manual. Please contact customer service for the latest program and supplementary documentation.
- There might be deviations in the description of the technical data, functions and operations, or errors in the print. If there is any doubt or dispute, we reserve the right of final explanation.
- Upgrade the reader software or try other mainstream reader software if the manual (in PDF format) cannot be opened.
- All trademarks, registered trademarks and the company names in the manual are the properties of their respective owners.
- Please visit our website, contact the supplier or customer service if any problems occur while using the device.
- If there is any uncertainty or controversy, we reserve the right of final explanation.

Important Safeguards and Warnings

Electrical safety

- All installation and operation should conform to your local electrical safety codes.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Note that the power supply requirements are subject to the device label.
- Make sure the power supply is correct before operating the device.
- A readily accessible disconnect device shall be incorporated in the building installation wiring.
- Prevent the power cable from being trampled or pressed, especially the plug, power socket and the junction extruded from the device.

Environment

- Do not aim the device at strong light to focus, such as lamp light and sun light; otherwise it might cause over brightness or light marks, which are not the device malfunction, and affect the longevity of Complementary Metal-Oxide Semiconductor (CMOS).
- Do not place the device in a damp or dusty environment, extremely hot or cold temperatures, or the locations with strong electromagnetic radiation or unstable lighting.
- Keep the device away from any liquid to avoid damage to the internal components.
- Keep the indoor device away from rain or damp to avoid fire or lightning.
- Keep sound ventilation to avoid heat accumulation.
- Transport, use and store the device within the range of allowed humidity and temperature.
- Heavy stress, violent vibration or water splash are not allowed during transportation, storage and installation.
- Pack the device with standard factory packaging or the equivalent material when transporting the device.
- Install the device in the location where only the professional staff with relevant knowledge of safety guards and warnings can access. The accidental injury might happen to the non-professionals who enter the installation area when the device is operating normally.

Operation and Daily Maintenance

- Do not touch the heat dissipation component of the device to avoid scald.
- Carefully follow the instructions in the manual when disassembling operation about the device; otherwise, it might cause water leakage or poor image quality due to unprofessional operations. Make sure that the gasket ring is flat and properly installed in the groove before installing the cover. Contact after-sales service for desiccant replacement if there is condensed fog on the lens after unpacking or when the desiccant turns green (Not all models are included with the desiccant).

- We recommend using the device together with lightning arrester to improve lightning protection effect.
- We recommend grounding the device to enhance reliability.
- Do not touch the image sensor (CMOS) directly. Dust and dirt could be removed with air blower, or you can wipe the lens gently with soft cloth that is moistened with alcohol.
- You can clean the device body with soft dry cloth, and for stubborn stains, use the cloth with mild detergent. To avoid possible damage on device body coating which could cause performance decrease, do not use volatile solvent such as alcohol, benzene, diluent to clean the device body, nor can strong, abrasive detergent be used.
- Dome cover is an optical component. Do not touch or wipe the cover with your hands directly during installation or operation. For removing dust, grease or fingerprints, wipe gently with moistened oil-free cotton with diethyl or moistened soft cloth. You can also remove dust with an air blower.

**WARNING**

- Please strengthen the protection of network, device data and personal information by adopting measures which include but not limited to using strong password, changing password regularly, upgrading firmware to the latest version, and isolating computer network. For some device with old firmware versions, the ONVIF password will not be modified automatically along with the modification of the system password, and you need to upgrade the firmware or manually update the ONVIF password.
- Use standard components or accessories provided by manufacturer and make sure the device is installed and maintained by professional engineers.
- The surface of the image sensor should not be exposed to laser beam radiation in an environment where a laser beam device is used.
- Do not provide two or more power supply sources for the device unless otherwise specified. A failure to follow this instruction might cause damage to the device.

1 Introduction

1.1 Cable

Waterproof all the cable joints with insulating tape and waterproof tape to avoid short circuit and water damage. For the detailed operation, see FAQ Manual.

Figure 1-1 Cables

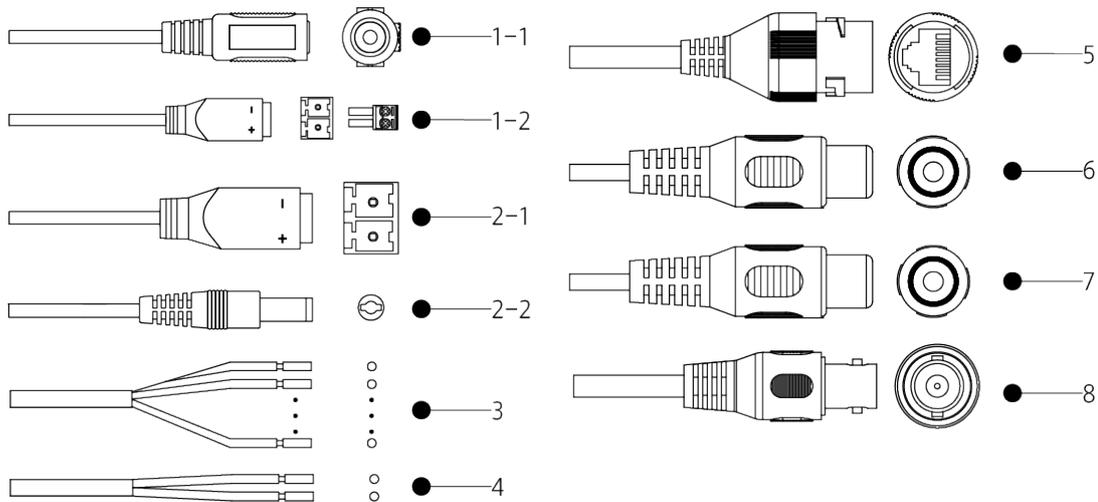

Table 1-1 Cable information

No	Port	Port Name	Description
1-1	POWER	Power	<ul style="list-style-type: none"> 1-1 is circular power port, and 1-2 is 2PIN terminal. 1-1 power port can be changed to 1-2 with a 2PIN terminal. Select power supply: If the cable label is marked DC 12V IN, input 12 VDC power; if the cable label is marked AC 24V IN, input 24 VAC power; if there is no statement on the cable label, select power as the device label marks.
1-2			<p> When the device has both 12 VDC and 24 VAC power cables, do not supply 12 VDC and 24 VAC power at the same time; otherwise device abnormality or damage could occur</p> <ul style="list-style-type: none"> Device abnormality or damage could occur if power is not supplied correctly.

No	Port	Port Name	Description
2-1	DC 12V Out	Power port	Supplies 12 VDC 2W power for external devices.
2-2			
3	I/O	Alarm I/O	Includes alarm signal input and output ports. See Table 1-2.
4	RS-485	RS-485	Controls external PTZ and so on.
5	LAN	Ethernet port	<ul style="list-style-type: none"> Connects to network with network cable. Provides power to the device with PoE.  <p>PoE is available on select models.</p>
6	AUDIO IN	Audio input	RAC port, connects to sound pickup device to receive analog audio signal.
7	AUDIO OUT	Audio output	RAC port, connects to speaker to output audio signal.
8	VIDEO OUT	Video output	BNC port, connects to TV monitor to check image when camera outputs analog video signal.

Table 1-2 Alarm information

Port	Port Name	Description
Alarm I/O	ALARM_OUT	Outputs alarm signal to alarm device.
	ALARM_OUT_GND	 <p>When connecting to alarm device, only the ALARM_OUT port and ALARM_OUT_GND port with the same number can be used together.</p>
	ALARM_IN	Receives the switch signal of external alarm source.
	ALARM_IN_GND	 <p>Connect different alarm input devices to the same ALARM_IN_GND port.</p>

1.2 Connecting Alarm Input/output

Alarm input/output is available on select models.

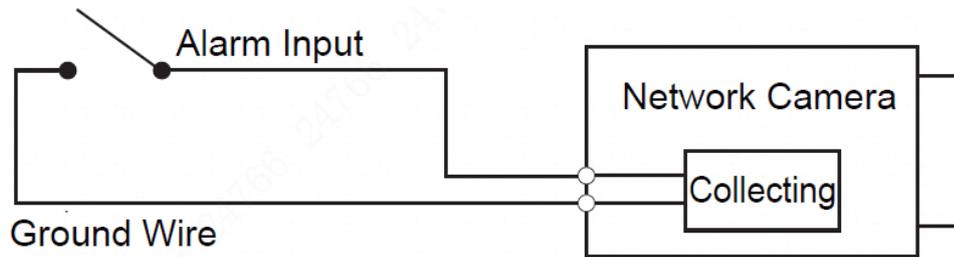

Step 1 Connect alarm input device to the alarm input end of the I/O port.

Device collects different states of alarm input port when the input signal is idling and grounded.

- Device collects logic "1" when input signal is connecting to +3 V to +5V or idling.

- Device collects logic "0" when input signal is grounded.

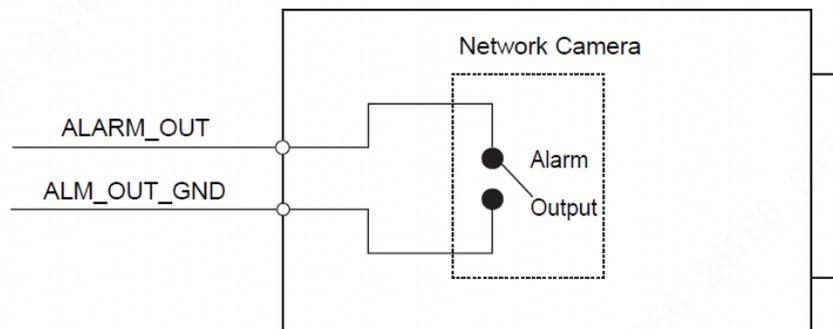

Figure 1-2 Alarm input

Step 2 Connect alarm output device to the alarm output end of the I/O port. The alarm output is relay switch output, which can only connect to NO alarm devices.

N1 and C1 or N2 and C2 constitute a switch to provide the alarm output, which is shown in Figure 1-3. The switch is open normally and closed when there is alarm output.

Figure 1-3 Alarm output

Step 3 Log in to web interface, and configure alarm input and alarm output in alarm setting.

- The alarm input on the web page is corresponding to the alarm input end of the I/O port. There will be high level and low level alarm signal generated by the alarm input device when alarm occurs, set the input mode to "NO" (default) if the alarm input signal is logic "0" and to "NC" if the alarm input signal is logic "1".
- The alarm output on the web interface is corresponding to the alarm output end of the device, which is also the alarm output end of the I/O port.

2 Network Configuration

Device initialization and IP setting can be finished with the ConfigTool or in web page. For more information, see web operation manual.

- Device initialization is available on select models, and it is required at first use and after device is being reset.
- Device initialization is available only when the IP addresses of the device (192.168.1.108 by default) and the PC stays in the same network segment.
- Plan useable network segment properly to connect the device to the network.
- The following figures and interfaces are for reference only.

2.1 Initializing Device

Step 1 Double-click ConfigTool.exe to open the tool.

Step 2  **Modify IP**.

Step 3 Click **Search Setting**.

Figure 2-1 Setting

Step 4 Select the searching way.

- **Current Segment Search** (default)
Select the **Current Segment Search** checkbox. Enter the username in the **Username** box and the password in the **Password** box. The system will search for devices accordingly.
- **Other Segment Search**
Select the **Other Segment Search** checkbox. Enter IP address in the **Start IP** box and **End IP** box respectively. Enter username and password. The system will search for the devices accordingly.

- If you select the **Current Segment Search** checkbox and the **Other Segment Search** checkbox together, the system searches for devices under both conditions.

- Enter username and password when you want to change IP, configure the system, update the device, restart the device, and more.

Step 5 Click **OK**.

Step 6 Select one or several devices in uninitialized status, and then click **Initialize**.

Step 7 Select the devices to be initialized, and then click **Initialize**.

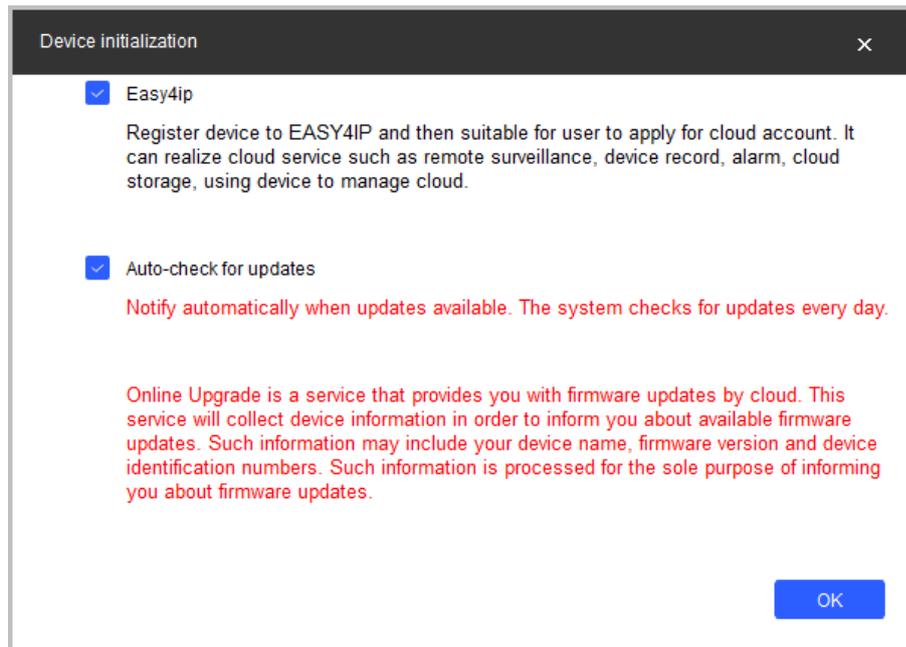

- If you do not provide the linked information for password reset, you can reset the password only through XML file.
- When initializing multiple devices, ConfigTool initializes all devices based on the password reset mode of the first selected device.

Figure 2-2 Password setting

Step 8 Set and confirm the password of the devices, then enter a valid email address, and then click **Next**.

Figure 2-3 Device initialization

Step 9 Select **Easy4ip** or select **Auto-check for updates** as needed. If neither, leave them unselected.

Step 10 Click **OK** to initialize the device.

Click the success icon (✓) or the failure icon (⚠) for the details.

Step 11 Click **Finish**.

2.2 Changing Device IP Address

- You can change IP address of one or multiple devices in one time. This section is based on changing IP addresses in batches.
- Changing IP addresses in batches is available only when the corresponding devices have the same login password.

Step 1 Follow Step 1 to Step 4 in "2.1 Initializing Device" to search devices in your network segment.

After clicking **Search Setting**, enter the **username** and **password**, and make sure that they are the same as what you set during initialization, otherwise there will be wrong password notice.

Step 2 Select the devices whose IP addresses need to be changed, and then click **Batch Modify IP**.

Figure 2-4 Change IP Address interface

Step 3 Select **Static** mode and then enter start IP, subnet mask and gateway.

- IP addresses of multiple devices will be set to the same if you select **Same IP** checkbox.
- If DHCP server is available in the network, devices will automatically obtain IP addresses from DHCP server when you select **DHCP**.

Step 4 Click **OK**.

2.3 Logging in to Web Page

Step 1 Open IE browser, enter the IP address of the device in the address bar and press the Enter key.

If the setup wizard is displayed, follow the instructions to finish the settings.

Step 2 Enter the username and password in the login box, and then click **Login**.

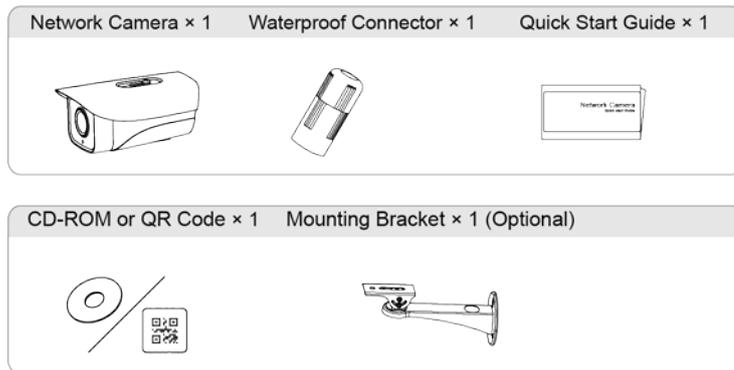

Step 3 For the first login, click **Click Here to Download Plugin** and install the plugin as instructed. The home page is displayed when the installation is finished.

3 Installation

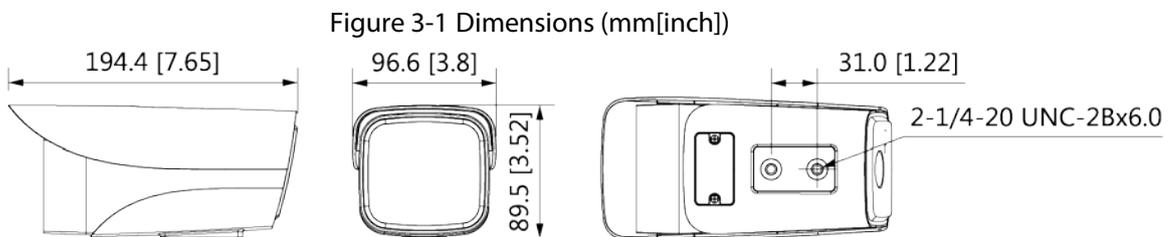

3.1 Packing List

- The tools required for the installation such as electric drill are not provided in the package.
- The operation manual and related tools are contained in the disk or the QR code.

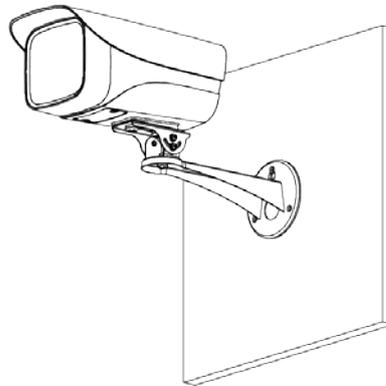

3.2 Dimensions

3.3 Installing Device

3.3.1 Installation method

Figure 3-2 Installation method

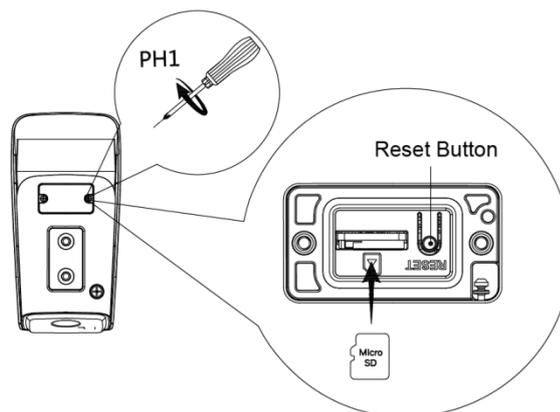

3.3.2 Installing SD Card (Optional)

- Press the reset button for 10 s to reset the device.
- For devices with motorized vari-focal lens, zoom and focus can be adjusted automatically; for devices with T/W button, zoom and focus can be adjusted with T/W button.
- You can connect monitor to the video out port with cable to view image.

Disconnect the power before installing or removing the SD card.

Figure 3-3 Install SD card

3.3.3 Attaching Device

Make sure that the mounting surface is strong enough to hold at least three times of the device weight.

Figure 3-4 Cable going through the wall

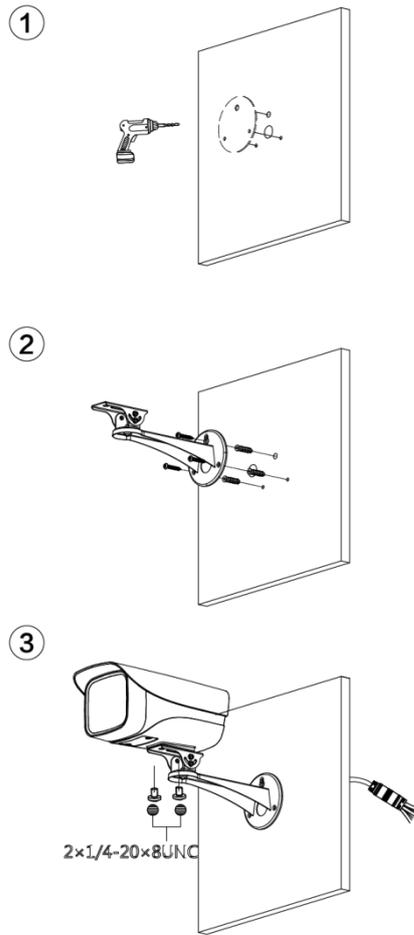

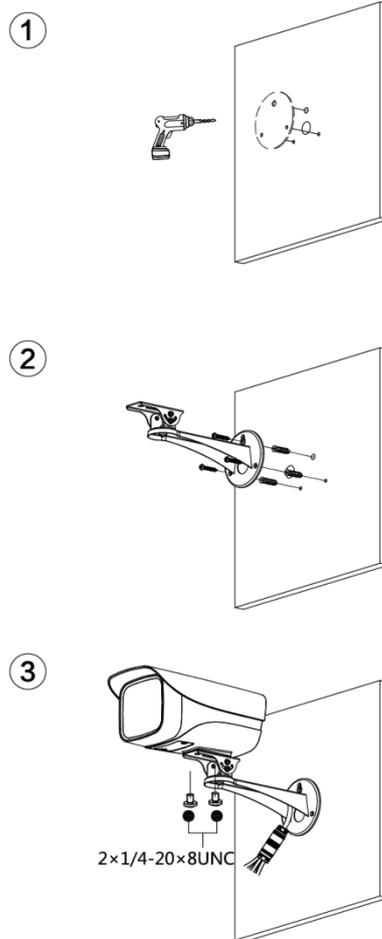

Figure 3-5 Cable going through the cable tray

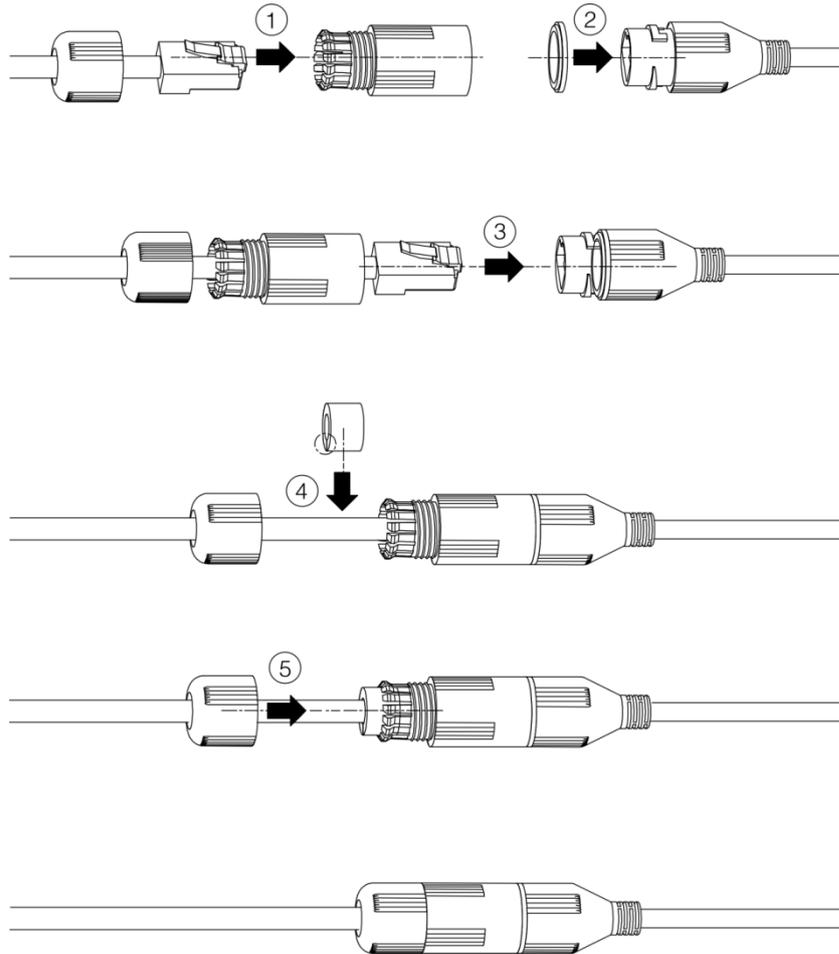

3.3.4 Installing Waterproof Connector (Optional)

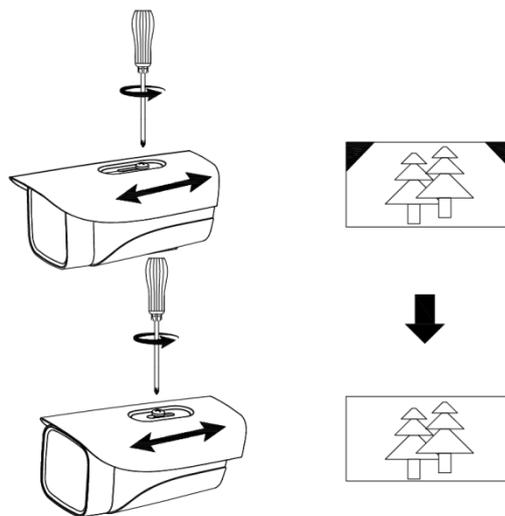

This part is only needed when there is waterproof connector in the package and the device is used outdoors.

Figure 3-6 Install waterproof connector

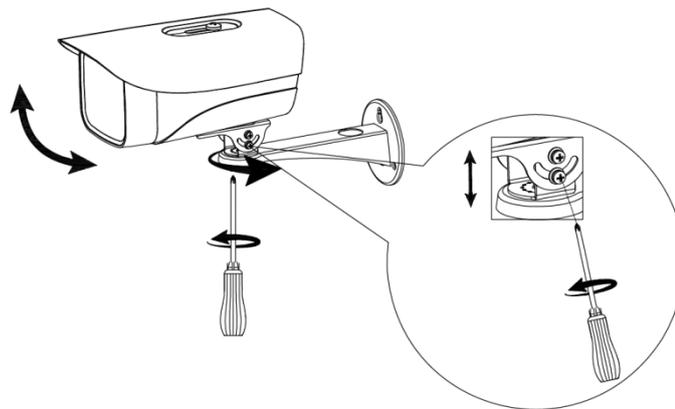

3.3.5 Adjusting Sunshade Cap

Figure 3-7 Adjust sunshade cap

3.3.6 Adjusting Lens Angle

Figure 3-8 Adjust lens angle
