No part of this manual may be reproduced or transmitted in any form or by any means without prior written consent of New H3C Technologies Co., Ltd.

**Trademarks**

Except for the trademarks of New H3C Technologies Co., Ltd., any trademarks that may be mentioned in this document are the property of their respective owners.

**Notice**

The information in this document is subject to change without notice. All contents in this document, including statements, information, and recommendations, are believed to be accurate, but they are presented without warranty of any kind, express or implied. H3C shall not be liable for technical or editorial errors or omissions contained herein.

**Environmental protection**

This product has been designed to comply with the environmental protection requirements. The storage, use, and disposal of this product must meet the applicable national laws and regulations.

# Preface

This installation guide describes the installation procedure for the H3C WA6628 access point.

This preface includes the following topics about the documentation:

- [Audience](#).
- [Conventions](#).
- [Documentation feedback](#).

## Audience

This documentation is intended for:

- Network planners.
- Field technical support and servicing engineers.
- Network administrators working with the WA6628 access point.

## Conventions

The following information describes the conventions used in the documentation.

### Command conventions

Convention	Description
<b>Boldface</b>	<b>Bold</b> text represents commands and keywords that you enter literally as shown.
<i>Italic</i>	<i>Italic</i> text represents arguments that you replace with actual values.
[ ]	Square brackets enclose syntax choices (keywords or arguments) that are optional.
{ x   y   ... }	Braces enclose a set of required syntax choices separated by vertical bars, from which you select one.
[ x   y   ... ]	Square brackets enclose a set of optional syntax choices separated by vertical bars, from which you select one or none.
{ x   y   ... }*	Asterisk marked braces enclose a set of required syntax choices separated by vertical bars, from which you select a minimum of one.
[ x   y   ... ]*	Asterisk marked square brackets enclose optional syntax choices separated by vertical bars, from which you select one choice, multiple choices, or none.
&<1-n>	The argument or keyword and argument combination before the ampersand (&) sign can be entered 1 to n times.
#	A line that starts with a pound (#) sign is comments.

### GUI conventions

Convention	Description
<b>Boldface</b>	Window names, button names, field names, and menu items are in Boldface. For example, the <b>New User</b> window opens; click <b>OK</b> .
>	Multi-level menus are separated by angle brackets. For example, <b>File &gt; Create &gt; Folder</b> .

## Symbols

Convention	Description
 <b>WARNING!</b>	An alert that calls attention to important information that if not understood or followed can result in personal injury.
 <b>CAUTION:</b>	An alert that calls attention to important information that if not understood or followed can result in data loss, data corruption, or damage to hardware or software.
 <b>IMPORTANT:</b>	An alert that calls attention to essential information.
<b>NOTE:</b>	An alert that contains additional or supplementary information.
 <b>TIP:</b>	An alert that provides helpful information.

## Network topology icons

Convention	Description
	Represents a generic network device, such as a router, switch, or firewall.
	Represents a routing-capable device, such as a router or Layer 3 switch.
	Represents a generic switch, such as a Layer 2 or Layer 3 switch, or a router that supports Layer 2 forwarding and other Layer 2 features.
	Represents an access controller, a unified wired-WLAN module, or the access controller engine on a unified wired-WLAN switch.
	Represents an access point.
	Represents a wireless terminator unit.
	Represents a wireless terminator.
	Represents a mesh access point.
	Represents omnidirectional signals.
	Represents directional signals.
	Represents a security product, such as a firewall, UTM, multiservice security gateway, or load balancing device.
	Represents a security module, such as a firewall, load balancing, NetStream, SSL VPN, IPS, or ACG module.

## Examples provided in this document

Examples in this document might use devices that differ from your device in hardware model, configuration, or software version. It is normal that the port numbers, sample output, screenshots, and other information in the examples differ from what you have on your device.

# Documentation feedback

You can e-mail your comments about product documentation to [info@h3c.com](mailto:info@h3c.com).

We appreciate your comments.

# 1 Preparing for installation

## Safety recommendations

**⚠ WARNING!**

Only professional technical engineers are allowed to install and remove the AP and its accessories. Read the safety instructions for the AP carefully before installing or servicing it.

To avoid possible bodily injury and equipment damage, read the following safety recommendations before installing the AP. Note that the recommendations do not cover every possible hazardous condition.

- Take adequate safety measures to avoid bodily injury and device damage.
- Place the AP in a dry and flat location and take anti-slip measures.
- Keep the AP clean and dust-free.
- Do not place the AP in a moist area and avoid liquid intrusion.
- Keep the AP and installation tools away from walkways.

## Site preparation

Before installing the AP, examine the installation site and make sure the AP will operate in a favorable environment. Make sure the temperature and humidity at the installation site meet the requirements in [Table1-1](#).

**Table1-1 Temperature and humidity requirements**

Item	Specification
Operating temperature	-10°C to +55°C (14°F to 131°F)
Storage temperature	-40°C to +70°C (-40°F to +158°F)
Operating humidity (RH), noncondensing	5% to 95%

## Installation accessories

**Figure1-1 Accessories provided with the AP**

Mounting bracket

M4 x 30 mm pan-head screw  
(3 sets)

Screw and screw anchor  
(3 sets)

# Installation tools

When installing the AP, you might need the following tools. Prepare the installation tools as required.

**Figure1-2 Installation tools**

Phillips screwdriver

Needle-nose pliers

Wire stripper

Marker

Diagonal pliers

Rubber hammer

Hammer drill

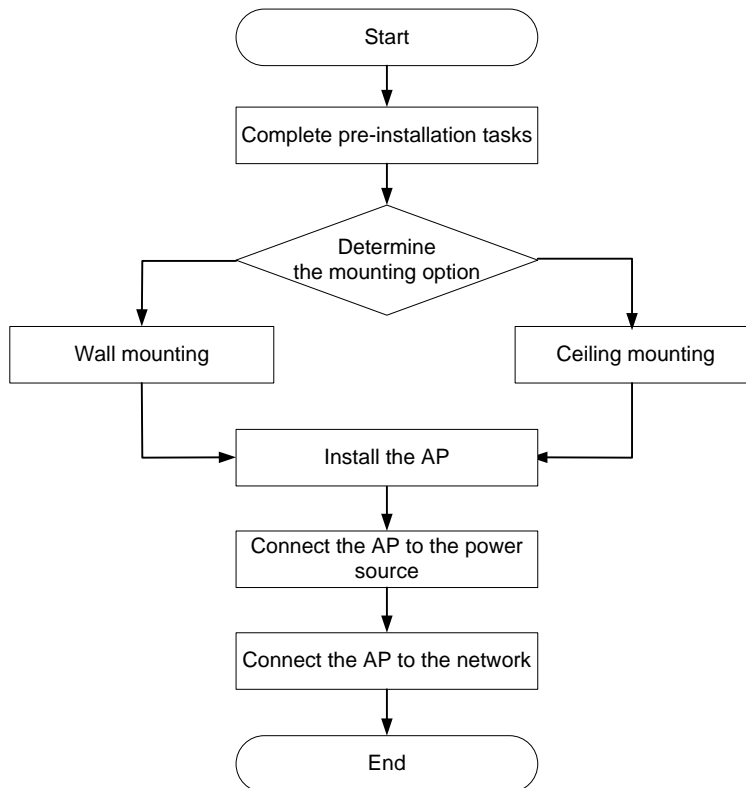

Drill

# 2 Installing the AP

## Installation flowchart

Figure2-1 Installation flowchart

## Pre-installation tasks

Before installing the AP, perform the following tasks:

- Connect the AP to a power source and the network. Examine the LEDs to verify that the AP is operating correctly. For information about AP LEDs, see "[LEDs](#)."
- Make sure cable routing has been completed.
- Use Category-5e or above twisted pair cables to connect 2.5/5 Gbps Ethernet ports and use Category-6 or above twisted pair cables to connect 10 Gbps Ethernet ports.
- Record the MAC address and serial number at the rear of the AP for future use.

## Determining the installation position

---

**△ CAUTION:**

If interface cables are routed outdoors, prepare network port lightning arresters and install them at the AP side.

---

Determine the installation position by observing the following principles:

- Few obstacles such as wall exist between the AP and clients.
- The AP is far away from electronic devices (such as microwave oven) that might generate radio frequency (RF) noise.
- The AP does not hinder people's daily work and life.
- The place is not water seeping, water soaking, or condensing.

## Mounting the AP

The AP can be installed only indoors. You can mount the AP on a wall or a ceiling.

### Mounting the AP on a wall

1. Place the mounting bracket against the wall and mark the installation holes on the wall.

**Figure2-2 Marking the installation holes on the wall**

2. Drill holes with a diameter of 6 mm (0.24 in) and a depth of 30 mm (1.18 in) at the marked locations, as shown in [Figure2-3](#).

**Figure2-3 Drilling holes in the wall**

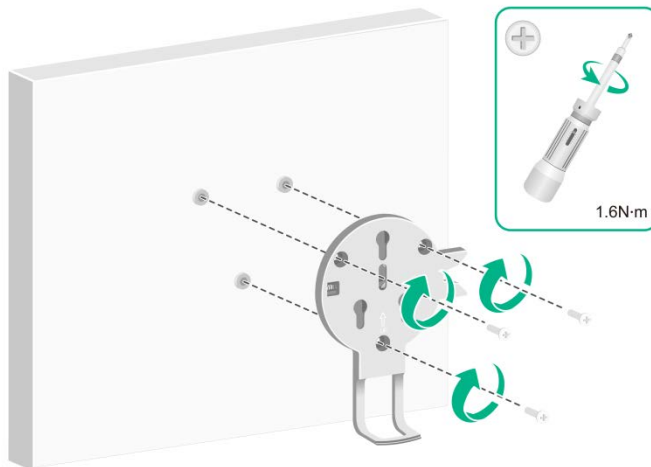

3. Insert a screw anchor into each hole, and tap the screw anchor with a rubber hammer until it is all flush with the wall surface, as shown in [Figure2-4](#).

**Figure2-4 Hammering the screw anchor into the wall**

4. Insert the screws through the installation holes in the mounting bracket into the holes in the wall. Fasten the screws to secure the mounting bracket to the wall, as shown in [Figure2-5](#).

**Figure2-5 Attaching the mounting bracket to the wall**

5. Remove the cable cover from the AP, feed cables through the cable holder, connect the cables to the AP, and then attach the cable cover to the AP. See [Figure2-6](#).

**Figure2-6 Connecting the cables to the AP**

6. Position the three screws on the AP into the keyhole slots in the mounting bracket and then slide the AP down until it clicks into place, as shown in [Figure2-7](#).

**Figure2-7 Attaching the AP to the mounting bracket**

## Mounting the AP on a ceiling

**△ CAUTION:**

The ceiling for installing the AP must be less than 18 mm (0.71 in) in thickness, and can bear a load of 5 kg (11.02 lb). If you must install the AP on a ceiling not strong enough, use boards to reinforce the ceiling.

To mount the AP on a ceiling:

1. Remove the ceiling tile.
2. Place the mounting bracket against the ceiling tile and mark the installation holes on the ceiling tile.
3. Drill three holes with a diameter of 6 mm (0.24 in) at the marked positions, as shown in [Figure2-8](#).

**Figure2-8 Drilling holes in the ceiling tile**

4. Thread the pan-head screws through the installation holes in the mounting bracket and into the holes in the ceiling tile. Fasten washers and nuts at the other side of the ceiling to secure the mounting bracket to the ceiling, as shown in [Figure2-9](#).

**Figure2-9 Attaching the mounting bracket to the ceiling**

5. Remove the cable cover from the AP, feed cables through the cable holder, connect the cables to the AP, and then attach the cable cover to the AP.
6. Position the three screws on the AP into the keyhole slots in the mounting bracket, as shown in [Figure2-10](#).

**Figure2-10 Attaching the AP to the mounting bracket**

7. Slide the AP in the opposite direction of the UP arrow until it clicks into place, as shown in [Figure2-11](#).

**Figure2-11 Securing the AP to the mounting bracket**

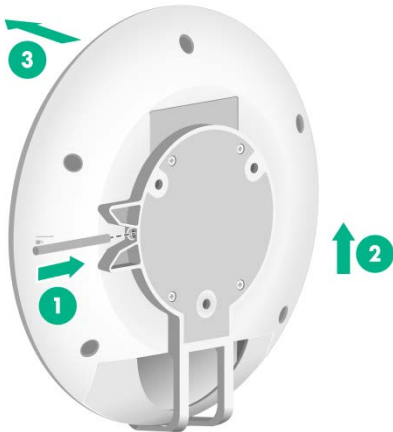

8. Verify that the AP is securely installed to prevent it from falling off.

## (Optional) Removing the AP

Insert a stick-like tool with a diameter less than 5.7 mm (0.22 in) into the lock hole of the mounting bracket until you hear a click. Then slide the AP in the direction of the UP arrow and disengage the screws from the keyhole slots to remove the AP.

**Figure2-12 Removing the AP**

## Connecting the AP to a power source

You can supply power to the AP by using a local power source, a power injector, or through 802.3af/802.3at/802.3bt PoE as required. Before powering the AP, make sure the power source (the local power source or the PSE) is reliably grounded.

## Connecting a PoE power source

---

**⚠ CAUTION:**

The AP is to be connected only to PoE networks without routing to the outside plant.

---

**⚠ IMPORTANT:**

The 10GE/PoE++ port complies with 802.3af, 802.3at, and 802.3bt standards and the GE/PoE+ port complies with 802.3af and 802.3at standards.

---

To power the AP through PoE, use an Ethernet cable to connect an Ethernet port on a PoE switch to the 10GE/PoE++ port or GE/PoE+ port on the AP. You can also connect both the 10GE/PoE++ and GE/PoE+ ports to the PoE switch to provide power to the AP.

Figure2-13 Powering the AP through PoE

## Connecting a local power source

You can use an AC/DC power adapter to connect the AP to a local power source. No power adapter is provided with the AP. Prepare one yourself as required. [Table2-1](#) describes the power adapter specifications.

Table2-1 Power adapter specifications

Item	Specification
Input	100 VAC to 240 VAC
Output	+54 VDC  at 0.74 A

Figure2-14 Using a power adapter to connect the AP to a local power source

## Connecting a power injector

### CAUTION:

The AP is to be connected only to PoE networks without routing to the outside plant.

As a best practice, use the H3C ADP040-54V-PoE-GL power injector. The power injector must be ordered separately.

To power the AP by using a power injector:

1. Connect the signal input port on the power injector to an Ethernet switch and the signal and power output port to the AP.
2. Connect the power adapter to the power injector.

**Figure2-15 Connecting a power injector**

## Check after power-on

Examine the LEDs on the AP after you power on it to verify that the AP is operating correctly. For more information about AP LEDs, see "[LEDs](#)."

## Connecting the AP to the network

To connect the AP to the network, connect the 10GE/PoE++ port on the AP to an Ethernet switch.

All AP settings are configured on the AC. To verify the network connectivity of the AP, execute the **display wlan ap all** command on the AC. If the AP status is **R/M**, the AP has been connected to the network.

```
<AC> display wlan ap all

# 3 Appendix A Technical specifications

Table3-1 Technical specifications

Item	Specification
Dimensions (H x W x D) (without the mounting bracket)	52 x 236 x 236 mm (2.05 x 9.29 x 9.29 in)
Weight	1300 g (45.86 oz)
System power consumption	<ul style="list-style-type: none"><li>• ≤ 25 W (not supplying power through USB port)</li><li>• ≤ 28 W (supplying power through USB port)</li></ul>
Powering option	<ul style="list-style-type: none"><li>• 802.3af/802.3at/802.3bt PoE</li><li>• Local 54 VDC power source (by using a power adapter)</li><li>• PoE injector</li></ul>
Antenna (built-in)	<ul style="list-style-type: none"><li>• 2.4 G: gain of 3 dBi</li><li>• 5 G: gain of 4 dBi</li></ul>
Protocol and features	<ul style="list-style-type: none"><li>• IEEE802.11a/b/g/n/ac/ax</li><li>• Two radios</li></ul>

# 4 Appendix B Ports and LEDs

## Ports

The AP provides the following ports:

- One USB port
- One console port
- One 10/100/1000M Ethernet copper port
- One 100/1000/2500/5000/10000M Ethernet copper port
- One power port

The AP also has a reset button and a security slot. The security slot is 7 x 3 mm (0.28 x 0.12 in) in size.

**Figure4-1 Ports on the AP**

(1) Reset button	(2) Console port	(3) USB port
(4) 100/1000/2500/5000/10000M Ethernet copper port (10GE/PoE++)		
(5) 10/100/1000M Ethernet copper port (GE/PoE+) (6) Power port		

**Table4-1 Port and button descriptions**

Port	Standards and protocols	Description
Console port	RS/EIA-232	Used only for device configuration and management by technical support.
100/1000/2500/5000/10000M Ethernet copper port (10GE/PoE++)	<ul style="list-style-type: none"> <li>IEEE802.3ab</li> <li>IEEE802.3bz</li> <li>IEEE802.3u</li> <li>IEEE802.3af</li> <li>IEEE802.3at</li> <li>IEEE802.3bt</li> </ul>	Used for connecting the AP to an uplink device for Internet or MAN access. It supports 802.3bt PoE++ and can receive PoE power from the uplink device. It is represented by interface number XGE1/0/1 in the MAP file and Ten-GigabitEthernet 1 for configuration on the AC.
10/100/1000M Ethernet copper port (GE/PoE+)	<ul style="list-style-type: none"> <li>IEEE802.3</li> <li>IEEE802.3u</li> <li>IEEE802.3af</li> <li>IEEE802.3at</li> </ul>	Used for connecting the AP to an uplink device for Internet or MAN access. It supports 802.3at PoE+ and can receive PoE power from the uplink device. It is represented by interface number GE1/0/1 in the MAP file and GigabitEthernet 1 for configuration on the AC.
Power port (54 V)	N/A	Used for receiving +54 VDC power from the local power source.
USB port	USB 2.0	N/A
Reset button	N/A	<ul style="list-style-type: none"> <li>To reset the AP, press and hold the button for no more than 5 seconds.</li> <li>To restore the factory default, press and hold the button for more than 5 seconds.</li> </ul>

# LEDs

**Table4-2 LED descriptions**

LED	Status	Description	
	Off	No power is present or the LED has been turned off from the CLI.	
	Yellow	Steady on	The AP is initializing, or an initialization exception has occurred.
		Flashing at 1 Hz	No radio cards have been detected.
		Flashing at 2 Hz	The Ethernet interfaces have been shut down and no mesh links have been established.
	Green	Steady on	The AP has started up and registered to an AC, but is in standby state (no associated clients).
		Flashing at 0.5 Hz	The AP is starting up, but has not registered to an AC.
		Flashing at 1 Hz	Only the 2.4G radio has associated clients.
		Flashing at 2 Hz	The AP is upgrading the image.
	Blue	Flashing at 1 Hz	Only the 5G radio has associated clients.
	Alternating between green and blue at 1 Hz		Both the 2.4G and 5G radios have associated clients.
